

## Technical Tip 09 - Running BXBwebsite from another application

September 2019

If another application needs to call BXBwebsite by passing parameters, these must be passed via POST method. Accepted parameters:

*User* (mandatory) - must be passed along with *Password* and *Company* to login automatically  
*Password* (mandatory) - encrypted with the MD5 hash algorithm  
*Company* - if not pass this parameter, or pass empty, considers the main company  
*Module* - module to open (BXBanalytics, BXBDashboard, BXBmonitor or BXBreports); if not pass this parameter, opens the user's default module  
*HideHeader*  
*HideFooter*  
*HideHeaderAndFooter*  
*HideUserSettings* – hide user settings button  
*HideLogout* – hide logout button

### HTML page example:

```
<html>
  <head></head>
  <body onload="document.myform.submit();">
    <form name="myform" action=" http://www.myserver.com/bxbwebsite/login.aspx "
method="POST">
      <input type="hidden" name="user" value="John" />
      <input type="hidden" name="password" value="eb0a191797624dd3a48fa681d3061212" />
      <input type="hidden" name="company" value="BXBcompany" />
      <input type="hidden" name="module" value="BXBDashboard" />
      <input type="hidden" name="hideHeader" value="true" />
      <input type="hidden" name="hideUserSettings" value="true" />
      <input type="hidden" name="hideLogout" value="true" />
    </form>
  </body>
</html>
```

### ATTENTION

If BXBwebsite is embedded in another application (through iframe, object or embed, for example) there are some particularities that must be checked. To consult, access item 5 of technical tip 10.
