

Technical Tip 25

ODBC permissions per company

It is possible to restrict which ODBC sources will be available to be used as a data source when you have more than one company registered in BXBwebsuite.

To set the permissions it is required to login with the user MASTER or a user with ADMIN profile in the main company profile and access "COMPANIES" module. On the screen where the registered companies are shown you find the options "Global ODBC permissions " and "ODBC Permissions".

Companies			Contact: +55 41 3373-0790 www.bxbsoft.com.br	Company: BXBcompany
New	Edit	Delete	Global ODBC Permissions	ODBC Permissions
Name	Database	License folder		
BXBcompany	bxbdatabase			
EBMC	ebmc	EBMC		
SKY	sky	sky		

When you click "Global ODBC Permissions" it opens a screen with the list of the 32-bit ODBC sources registered on the server where BXBwebsuite is installed. Next to each ODBC source there is a field with the types of permissions available.

Global ODBC Permissions
✕

ODBC	Global ODBC Permissions
EBMC	Per company ▼
Excel	Only for the main company ▼
Firebird	Only for the main company ▼
RCR	Only for the main company ▼
SKY	Per company ▼
texto	For all companies ▼

For all companies

Only for the main company

Per company

Save
Cancel

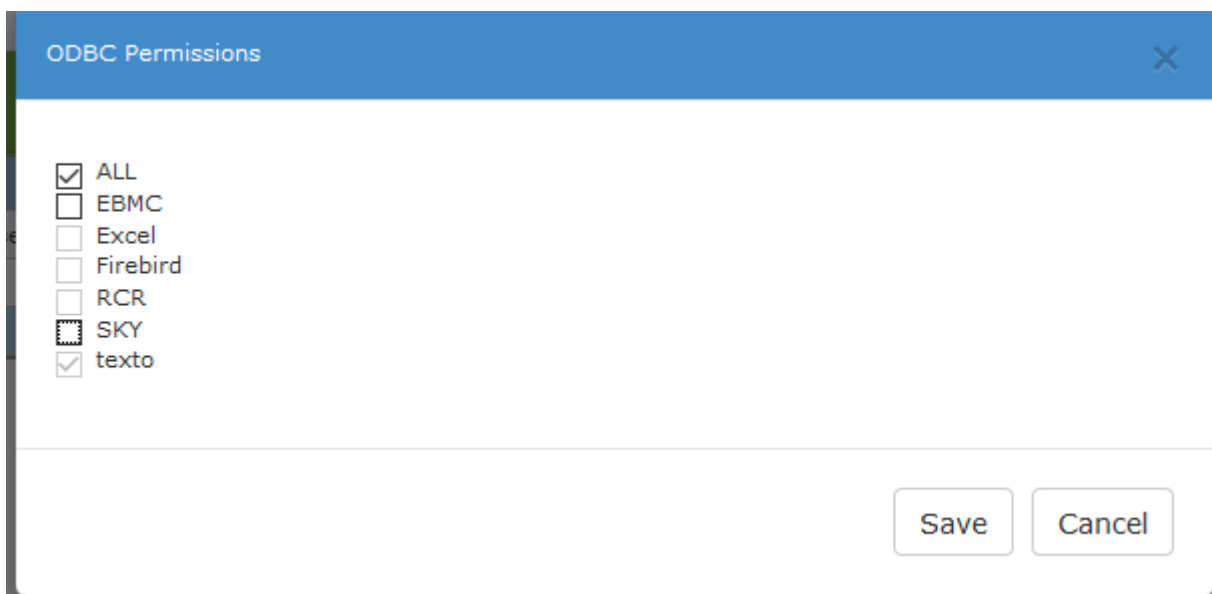

By default, all ODBC sources are only available for the main company.

The other options are:

- "Per Company", where the ODBC source is available to be configured as a data source to all companies registered; and

- "For all companies", where the ODBC source is automatically available to all companies registered.

When configuring an ODBC source with permission "Per company" it is possible to check which ODBC sources are available, by selecting a company and clicking on the option "ODBC Permissions".

In the above example the ODBC source "texto" is automatically enabled because its permission has been set as "for all companies" and the ODBC sources "SKY" and "EBMC" are available because their permissions have been configured as "per company". The rest is disabled because the companies have been configured as "only for the main company".
